CHALLENGES ⌄

Fredon Industries engaged ToolPal in November 2017 to modernise its asset management systems and processes. At the time Fredon used a spreadsheet-based system requiring many manual processes and man-hours to keep tabs on assets. Their asset database was highly inaccurate and infrequently updated due to the onerous nature of the system & processes.

SOLUTION ⌄

ToolPal's QR code-based asset tracking software was initially implemented in the Fredon NSW business to prove it's value. Then, in 2020 due to the success in NSW, ToolPal was rolled out accross all divisions of the company.

Cloud Based Portal

Automated Reporting & Alerts

BENEFITS ⌄

1 | **Transparency & Accountability**
By having assets correctly assigned to job sites & the foreman responsible, Fredon has reported a significant reduction in asset loss and damage reduction.

2 | **Assets Maintained Correctly & On Time**
Automatic alerts and reminders are sent to not only the warehouse manager but also other relevant stakeholders. As a result, Fredon has experienced increased asset availability and longevity.

3 | **Minimised Hire Costs & Increased Productivity**
By having an easily searchable asset database that is accessible from any device, project teams can now quickly search and locate assets for their jobs. This has greatly reduced 'ring arounds' to locate assets and buying/hiring expenses.
